I urge the EPA to select an alternative for the Portland Harbor Superfund clean up that is the most protective of the environment in the long term.

Contaminated sediments should be removed and disposed of in a facility certified to handle hazardous waste, not left in the river where they could potentially re-mobilize. Additionally, the alternatives analysis should be amended to discuss the impact of the FEMA BiOp on the viability of the alternatives proposed.

The citizens of Portland deserve a river that is cleaned to a level that ensures the lowest additional exposure to contamination in the future.
